

The Right Software Partner for a Smarter, More Profitable Trade Contractor

Built Specifically for Subcontractors

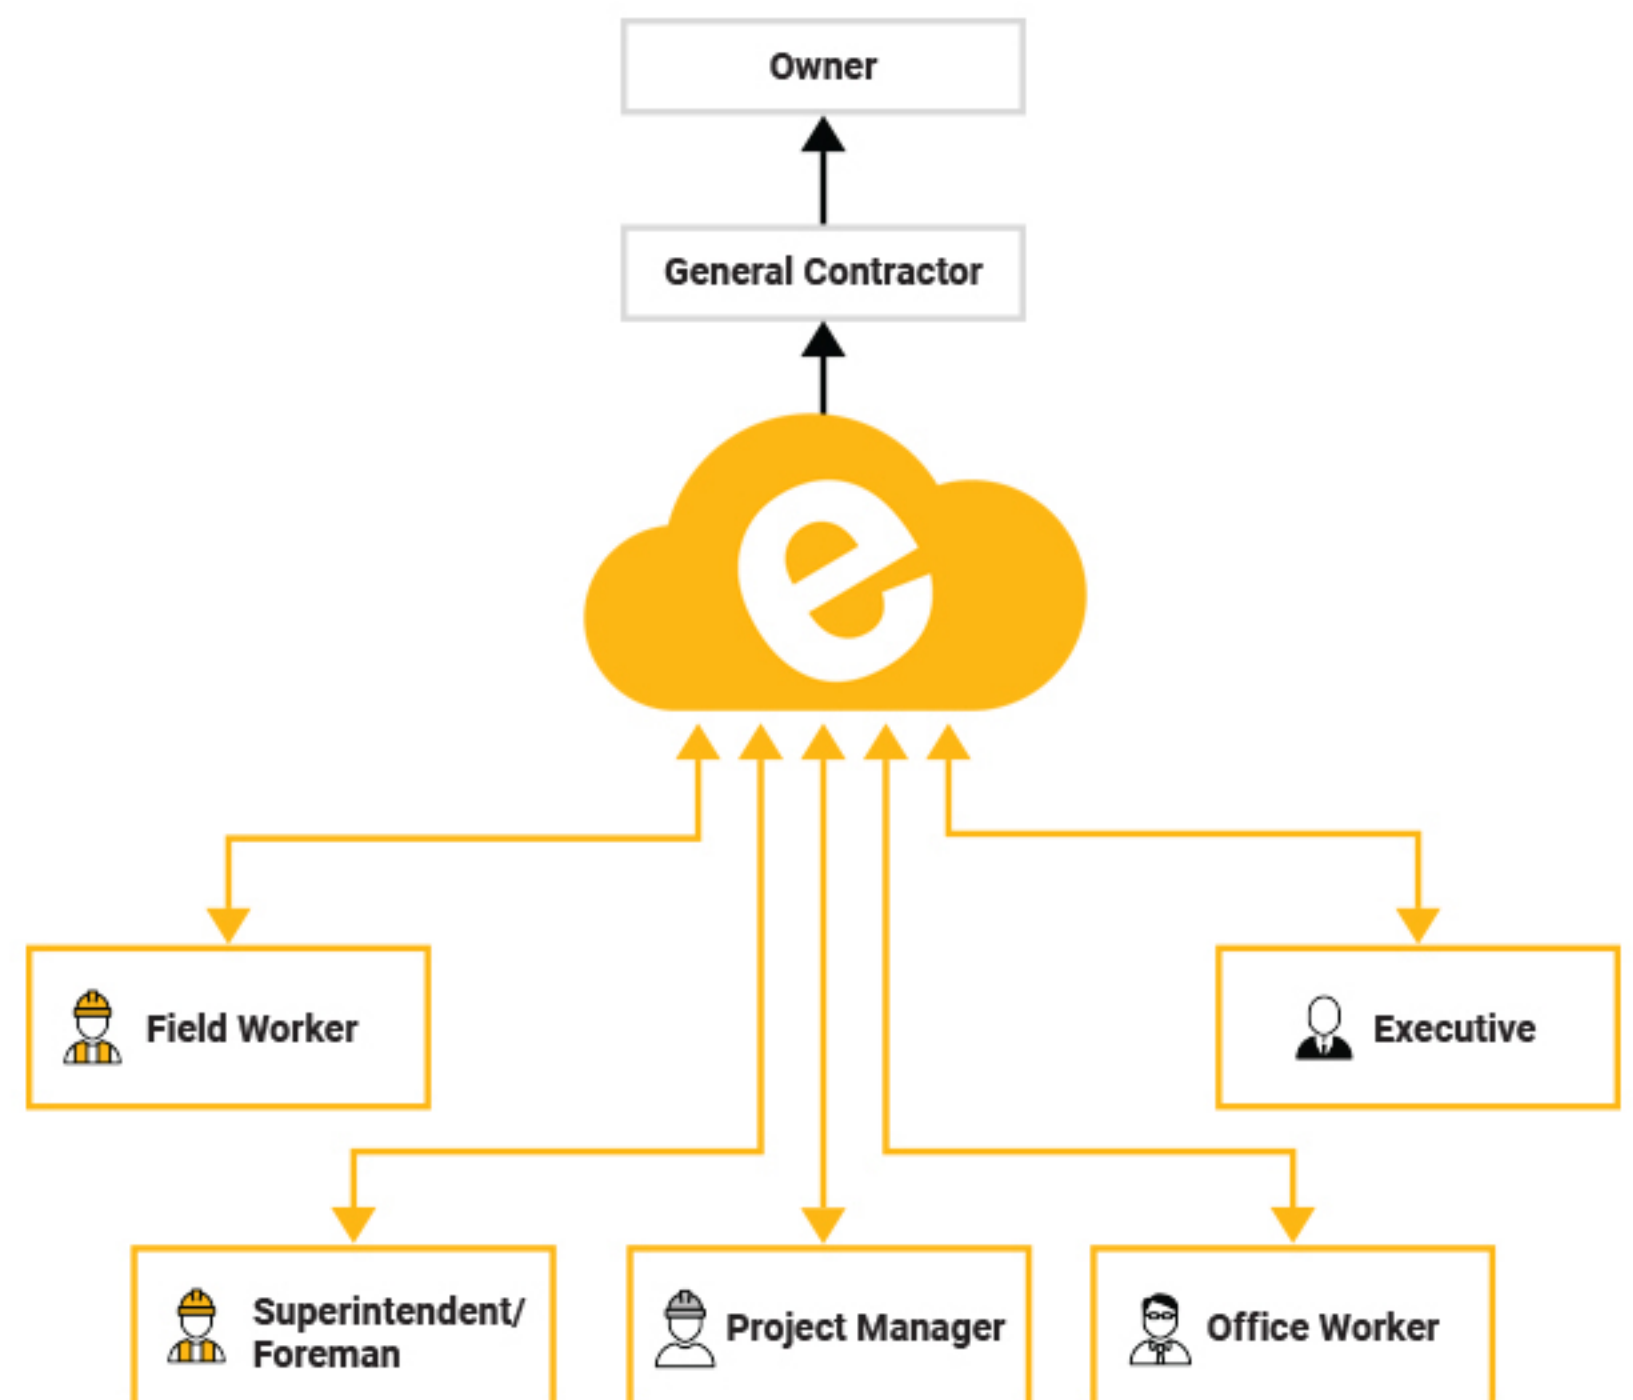

Subcontractors are under immense pressure from general contractors to complete their projects on tight schedules with fewer available skilled workers and unpredictable costs. To meet these requirements, subcontractors have to:

- ✓ Accurately forecast AND track time and materials
- ✓ Eliminate data silos to improve back office efficiency
- ✓ Deliver radical transparency between the field and office
- ✓ Crush double entry with accounting integrations

At eSUB Construction Software, we developed a project management platform built specifically for subcontractors. In fact, that's all we do. Our development and customer success teams have partnered with clients from every trade to protect and grow their businesses by providing them with a platform to capture, deliver and analyze jobsite documents, time, purchase orders, submittals, and correspondence, from any device or location.

Executives and project managers have the ability to access real-time information, approve requests and change orders, update project forecasts, and securely store data all in a single place. With eSUB, subcontractors can more quickly and confidently react to spiraling costs, productivity issues, legal actions, and long-term reputational risks. All at a fraction of their typical insurance costs or project losses.

eSUB Cloud - A Complete Platform for Your Unique Needs

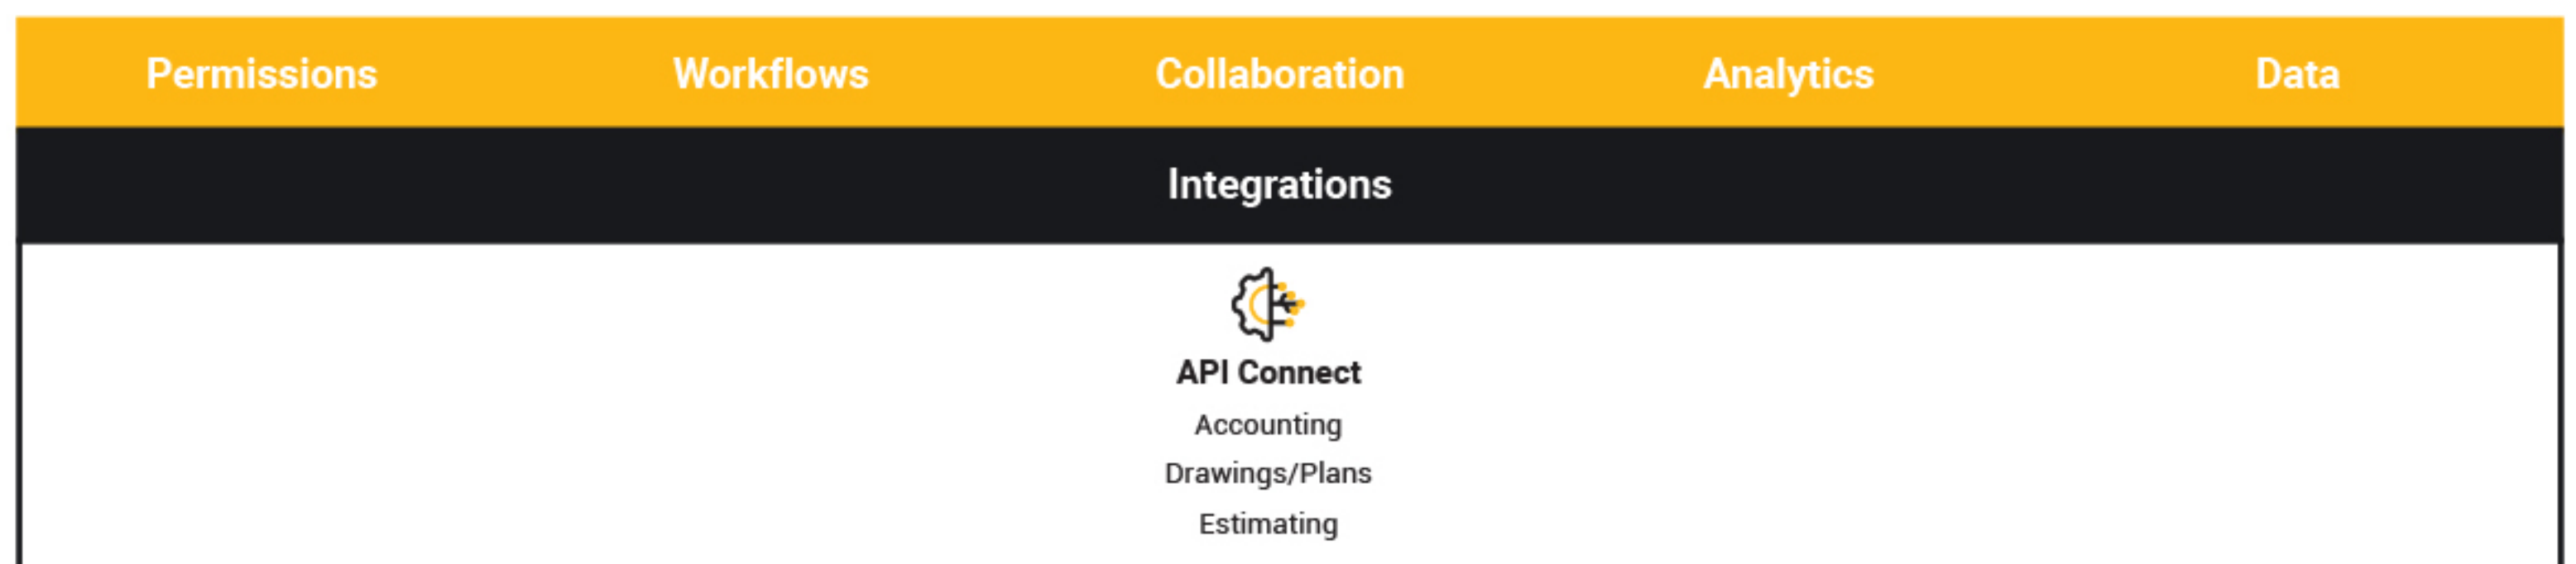

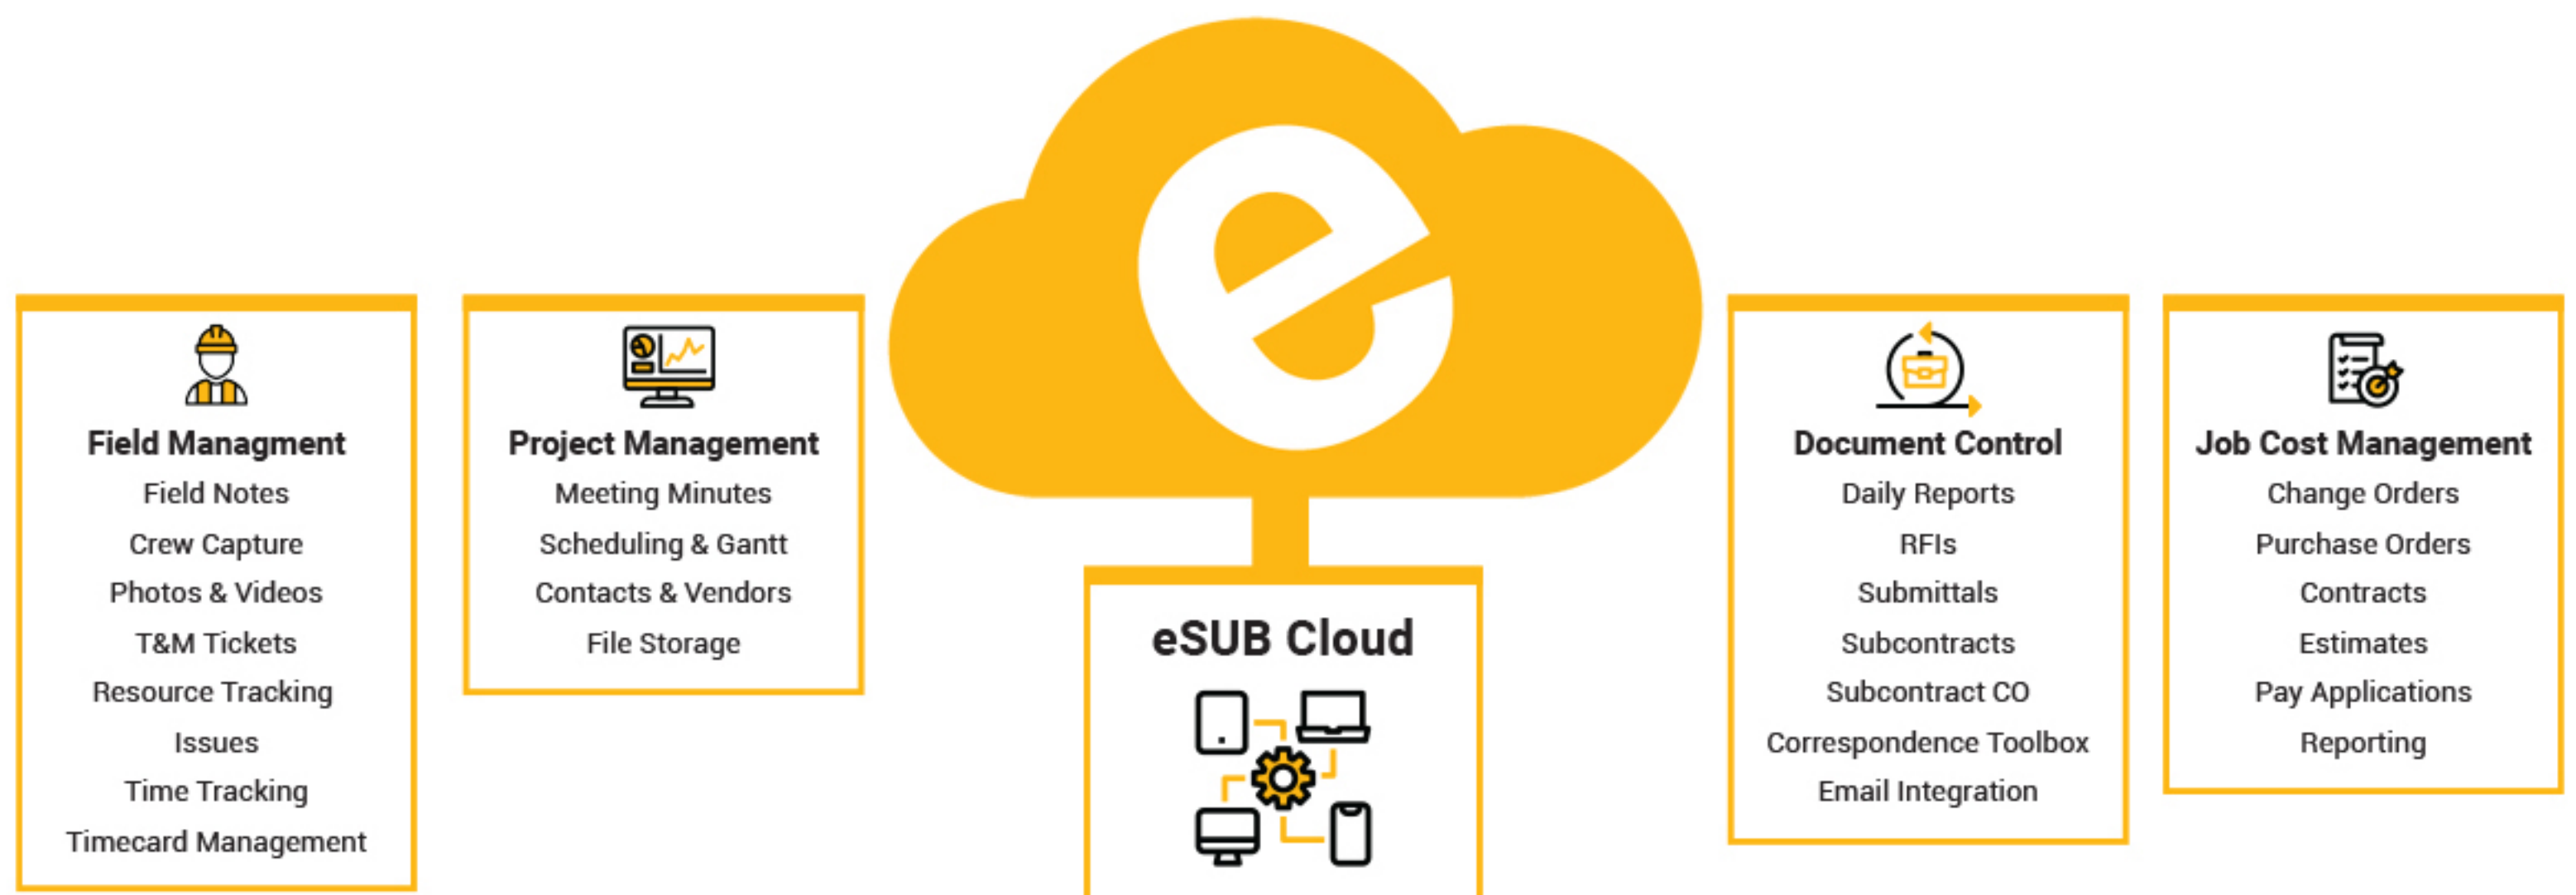

eSUB Cloud gives subcontractors the ability to standardize their project management processes through a comprehensive set of tools to reduce their risk and maximize their profits. Foremen and their crews can more quickly enter critical project data right from the field, stay current on the latest documents and emails, and have continuous mobile access to drawings, submittals, and data to find answers to RFIs.

As a flexible and module-driven platform, eSUB Cloud brings together an integrated set of multiple point solutions into one back-end home. Our clients are able to utilize only what they need and implement other applications at their own rate and pace. Through open APIs, eSUB Cloud customers can seamlessly integrate and share data with their drawing management and accounting systems.

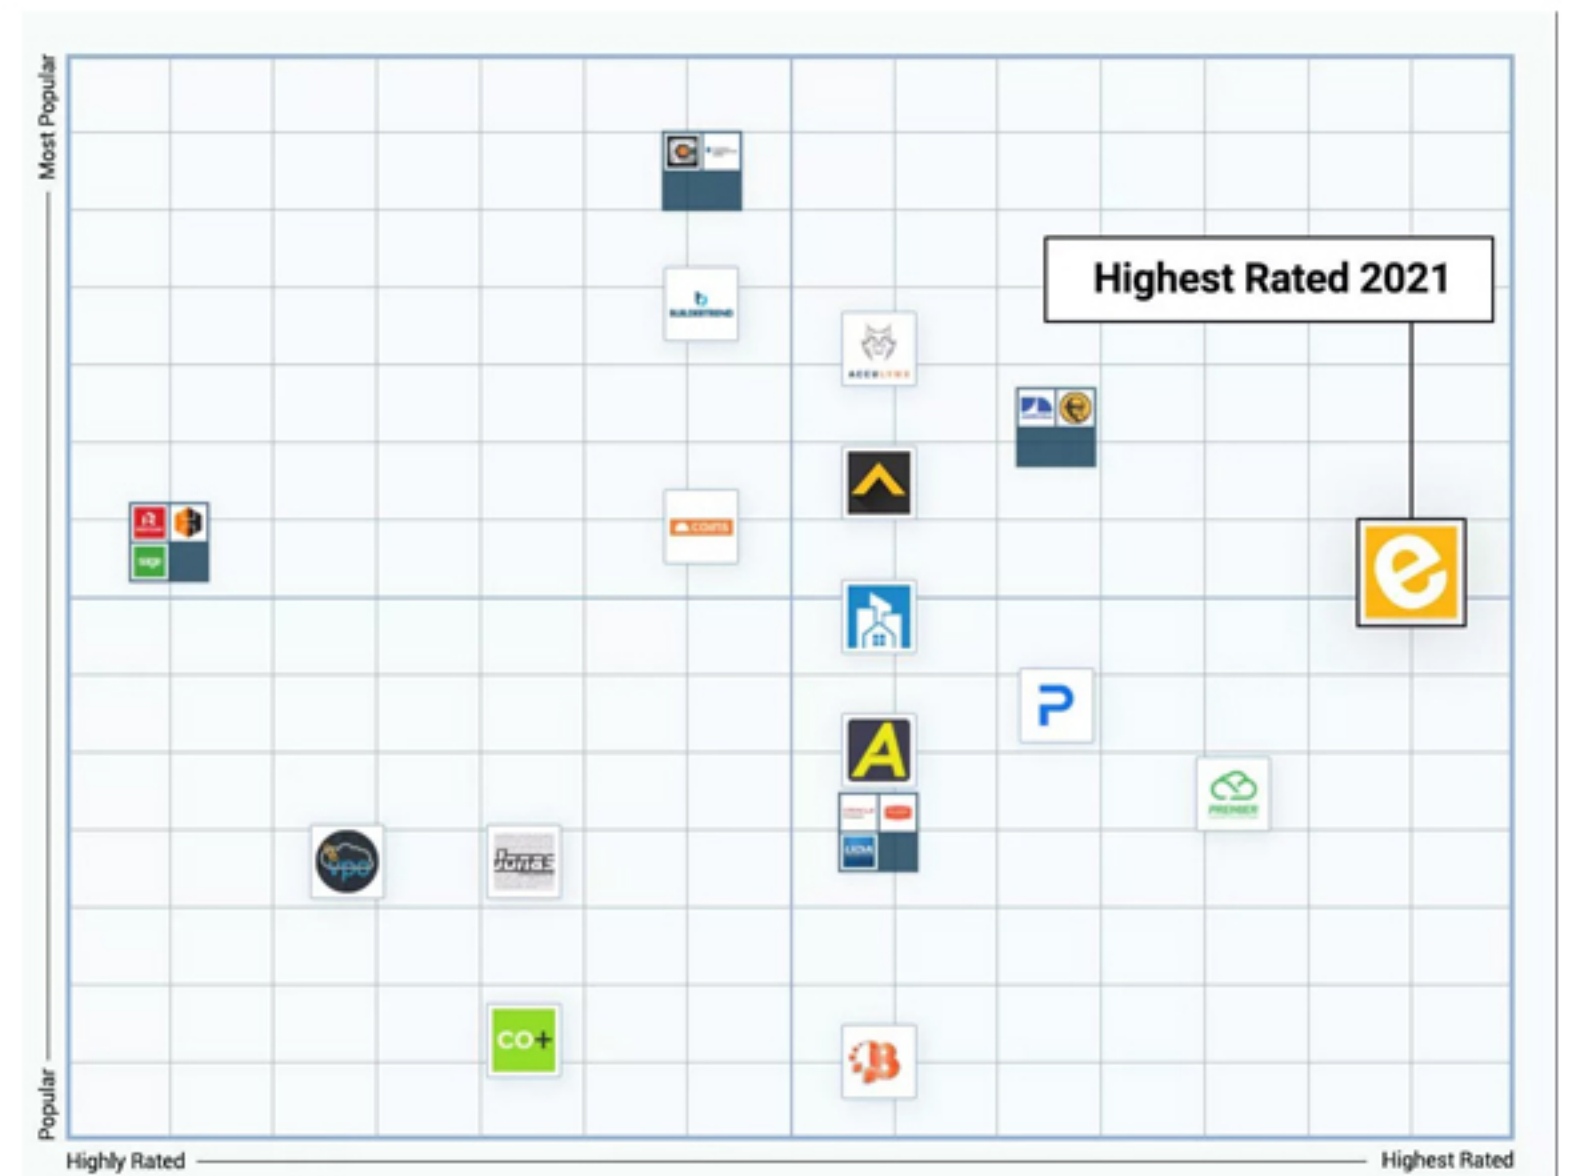

“When we saw eSUB, we realized it was a good fit for time reporting, but that it could also solve the problem of getting information into Sage without double data entry. There were a lot of solutions out there that were intriguing, but eSUB did more of the things we needed.”

Craig Berman, CEO, Geauga Mechanical

Long-term Partners in Your Success

At eSUB, our mission is to empower and elevate subcontractors with a software platform foundational to your success right now and for years to come. Our customer success, support and learning management teams have deep experience getting our clients up and running on our software quickly with minimal disruption to daily business. We are committed to regularly providing ongoing enhancements to the platform to optimize user experience and further streamline workflows critical to subcontractors.

See What eSUB Can Do for You

With over 700 subcontractor clients in North America and \$15B in project revenue actively managed in our platform, eSUB Construction Software sets the standard for high-performing subcontractors. Contact us today to share your time tracking, job data visibility and project management challenges so we can develop your personalized demo of eSUB Cloud.
